Intent

Geography helps us to make sense of the world around us and better understand the places we live in, learn about and visit. Through geography, we encounter different societies and cultures and learn to appreciate the incredible diversity of landscapes and peoples and how they are connected to a globalised world. We face questions of what it means to live sustainably in an interdependent world and learn to value and care for the planet and all its inhabitants.

At Broadbottom Primary School, we want geography to inspire pupils' curiosity and fascination about the world, and its people, that will remain with them for the rest of their lives. Teaching should equip pupils with knowledge about diverse places, people, resources and natural and human environments, together with a deep understanding of the Earth's key physical and human processes.

What do we learn about in Geography?

- Landscapes
- Human and physical features
- Landmarks
- Physical systems and processes
- Environments
- Settlements
- Biomes
- Climate
- Land use
- Environmental issues
- Sustainability

Implementation

How is Geography taught at Broadbottom?

Following the Dimension thematic units, we ensure that a combination of high quality subject knowledge, geographical skills, enquiry and fieldwork is taught. Alongside this, we want children to know and understand a range of geography vocabulary, which is built upon each year. Learning takes place both inside and outside the classroom and we aim to create a stimulating, engaging and challenging environment to learn in. Teachers are also encouraged to plan in trips and visitors to enhance our children's learning experience.

Impact

Geography is taught through themes that begin with a recap of learning from previous units and years. Lessons include regular recaps and quizzes to help children

recall knowledge and learning from previous lessons and units. This allows children to see the value in linked learning and transferable skills cross different subject areas.
